PRACTICE SHEET-1

1. The diagonal of a square is $4\sqrt{2}$ cm. The diagonal of another square whose area is double that of the first square is:
(1) $8\sqrt{2}$ cm (2) 16 cm
(3) $\sqrt{32}$ cm (4) 8 cm

2. The breadth of a rectangular hall is three-fourth of its length. If the area of the floor is 768 sq. m., then the difference between the length and breadth of the hall is:
(1) 8 metres (2) 12 metres
(3) 24 metres (4) 32 metres

3. The length of a plot is five times its breadth. A playground measuring 245 square metres occupies half of the total area of the plot. What is the length of the plot?
(1) $35\sqrt{2}$ metres (2) $175\sqrt{2}$ metres
(3) 490 metres (4) $5\sqrt{2}$ metres

4. The difference between the length and breadth of a rectangle is 23 m. If its perimeter is 206 m, then its area is

8. The sides of a triangle are 3 cm, 4 cm and 5 cm. The area (in cm^2) of the triangle formed by joining the mid points of this triangle is:
(1) 6 (2) 3
(3) 3/2 (4) 3/4

9. From a point in the interior of an equilateral triangle, the length of the perpendiculars to the three sides are 6 cm, 8 cm and 10 cm respectively. The area of the triangle is
(1) 48 cm^2 (2) $16\sqrt{3}$ cm^2
(3) $192\sqrt{3}$ cm^2 (4) 192 cm^2

10. The area of an isosceles triangle is 4 square unit. If the length of the third side is 2 unit, the length of each equal side is
(1) 4 units (2) $2\sqrt{3}$ units
(3) $\sqrt{17}$ units (4) $3\sqrt{2}$ units

11. 360 sq. cm and 250 sq. cm are the area of two similar triangles. If the length of one of the sides of the first triangle be 8 cm, then the length of the corresponding side of the
